

FOR IMMEDIATE RELEASE

**EyeQ's Perfectly Clear AI Automatic Photo Editing Can Now Be Seamlessly Accessed by Kodak DP2 Users**

*Perfectly Clear® AI by EyeQ is now fully integrated into the DP2 workflow to allow labs seamless access to professional-quality corrected imagery*

**Calgary, Alberta and Austin, Texas (February 15)** – EyeQ Imaging Inc. (EyeQ) announced today Perfectly Clear AI's full integration into the Kodak Professional Digital Print Production Software/DP2 (Kodak DP2). Kodak DP2 users can now access EyeQ's world-leading automatic image correction, Perfectly Clear AI, directly in the Kodak DP2 software. Users have the choice of submitting images through the cloud or process them locally.

"It's important to us for Perfectly Clear AI to be accessible anywhere, any way," said Brad Malcolm, EyeQ's co-founder and CEO. "This new Kodak DP2 integration removes the barrier to entry for this type of workflow. Accessing our patented technology no longer requires leaving the DP2 software, a request we've had from many leading labs."

Perfectly Clear AI technology automatically corrects more than 51 billion photos every year for some of the top imaging companies around the world. Classic science and artificial intelligence are used synergistically together to identify the contents of the image, then apply a targeted correction accordingly. Retouching is also included as an optional service.

"DP2 is the digital imaging backbone for professional labs, so we look for partnerships to enhance that," said Allan Ko, Director of Information Technology Department & ECommerce at Sino Promise Group. "Speed and production are our number one goals, so Perfectly Clear AI's proven automation fits right in."
